iManage Govern
Threat Manager

Protect data from external and internal threats

KEY BENEFITS

- Detect sophisticated threats from internal or external actors

- Reduce the risk of data breaches

- Accelerate time to investigate fraudulent behavior

- Reduce false positives, ensuring that precious resources are spent on the alerts that are most likely to be fraudulent

Clients entrust professional services firms with their most privileged information including compensation, valuation, M&A due diligence, and patents. Many firms have been the targets of high profile phishing attacks, or insider malfeasance, which render the traditional security stack that protects the network perimeter ineffective. This new risk, has increased the focus and urgency around information security and governance at both professional services firms and their clients.

iManage Threat Manager - Protect your sensitive data

iManage Threat Manager is designed to meet the needs of CIOs, CSOs and compliance officers looking for advanced solutions to protect sensitive data. Threat Manager, leverages historical and contextual information in the iManage system to provide faster identification of both external and internal threats, and avoids pitfalls such as "false positives" that plague many other approaches. iManage Threat Manager delivers threat detection, monitoring, investigative capabilities, alerts and reporting to protect sensitive information in your iManage system 24/7 across any device, anywhere.

Threat Manager provides 24/7 continuous threat protection enabling you to detect and neutralize threats as soon as they manifest themselves

IMANAGE WORK PRODUCT MANAGEMENT

- **iManage Work:** Secure document and email management

- **iManage Share:** Secure governed file sharing and collaboration

- **iManage Insight:** Enterprise content search and analysis

- **iManage Govern:** Archiving, Records, Threat detection and Security Policy Management

Comply with client regulations

Clients now contractually require firms to demonstrate proper controls in place to protect their sensitive information. Clients want to be notified when stipulated thresholds are exceeded and periodically audit systems. iManage Threat Manager gives you the capabilities and confidence to meet the demands of even the most challenging clients.

Detect threats with the highest levels of accuracy

Traditional approaches attempt to identify threats by analyzing data such as application logs, network traffic, endpoint device activity, and files downloaded by a user. These generic approaches lead to both high false positives and unnecessary investigation cost. iManage Threat Manager understands the unique context in which professionals operate—practice areas, clients, projects and applies state-of-the-art machine learning against data with highest value, such as engagements accessed where no time is billed, or matters accessed outside a practitioner's area of expertise. This ensures that overburdened resources investigate alerts that have the highest probability of being malicious.

Comprehensive investigative tools, reports and process automation reduce the time and effort to neutralize a threat

Working under the assumption of a breach is the new norm. Attackers reside within a network an average of 146 days before they are detected. Ideally the firm should be able to prevent damage as soon as the threat is detected. Threat Manager provides advanced forensics and granular event reconstruction to ensure rapid investigation of an alert.

Easy to deploy, support and integrate with -available on the cloud or as an appliance (on premises)

Built using elastic cloud architecture, Threat Manager seamlessly connects to the iManage databases and, optionally, to your time and billing or matter management system to ingest information. Once data ingestion is complete, Threat Manager automatically starts scanning for malicious behavior. Threat Manager is easy to integrate with your existing information security stack including SIEM tools. Alerts from Threat Manager can be easily pushed out to a SIEM device.

24/7 Continuous threat protection

Once configured Threat Manager provides 24/7 continuous threat protection enabling you to detect and neutralize threats as soon as they manifest themselves.
